

FACULTY OF INFORMATICS AND COMPUTING (FIK)

CSD 34203 Special Topics in Software Development

Individual Project: GitHub Portfolio (Personal Blog Page) CLO3 - 20%

1. Introduction

Students are required to Create a personal GitHub project portfolio that includes at least one completed software project. The project should be uploaded to GitHub with proper documentation (README), and should demonstrate understanding of the software development process.

Entrepreneurial skills in a GitHub portfolio project reflect a student's ability to think innovatively, solve problems, communicate ideas, and manage projects independently. These skills go beyond coding; they demonstrate initiative, adaptability, and value creation.

2. Course Learning Outcome

By the end of this project, students are expected to demonstrate entrepreneurial mindset through project execution and documentation.

Project Requirements

1. One Main Project

- - Choose one project idea (Personal Blog Page)
 - A simple tech stack (HTML/CSS/JS, or Python, or any language you're learning)

2. Proper README.md File

- - Project name and short description
 - List of features
 - Technologies used
 - (Optional) Screenshot or short screen recording

3. Use of GitHub

- - Create a new GitHub repository for the project
 - At least 3 meaningful commits
 - Folder structure must be organized

1. Student Checklist - *For GitHub Portfolio – Personal Blog Project (CLO3, 20%)*

◆ Before Starting the Project

- Read the full assignment brief
- Choose a simple theme for your personal blog
- Install required tools (VS Code, Git, Browser)
- Create and set up a GitHub account

2. Development Checklist

A. Project Setup

- Create a new GitHub repository
- Clone the repository to your computer

B. Coding Requirements

- Home page created
- About page created
- Blog page created with 2–3 sample posts
- Contact page included
- Website responsive for mobile
- CSS styles included (layout, colors, typography)
- Basic JavaScript interaction (optional: dark mode, animation)

◆ GitHub Requirements

- Minimum **3 meaningful commits**
- Good commit messages (e.g., “Added blog layout”, “Styled about page”)
- Updated README.md
- Organized and clean repository
- Optional: Deploy using GitHub Pages

◆ **Documentation**

- README.md includes:
 - Project title
 - Description
 - Features
 - Technologies used
 - Screenshots
 - How to run the project
 - Demo link (if deployed)

◆ **Final Submission**

- GitHub repository link submitted to SPB by Week 12.

Entrepreneurial Skills (MQF4b) – 20%

No.	Criteria	Excellent (10)	Good (8)	Satisfactory (6)	Weak (4)	Poor (2)
1	Initiative	Proactively explores advanced features beyond requirements	Shows clear effort beyond basic requirements	Completes required tasks independently	Relies on guidance frequently	No initiative shown
2	Creativity & Innovation	Unique and highly original blog design/functionality	Some creative elements present	Basic design with minor creativity	Minimal originality	No creative effort
3	Problem-Solving Skills	Independently solves issues and documents solutions	Solves problems with minor help	Solves basic issues	Struggles with problem-solving	Unable to solve issues
4	Opportunity Recognition	Identifies real-world application/value of project	Some awareness of project usefulness	Basic understanding of purpose	Limited awareness	No understanding of relevance
5	Risk-Taking & Experimentation	Experiments with new tools/technologies confidently	Tries some new approaches	Uses familiar tools only	Avoids new approaches	No experimentation
6	Planning & Organization	Excellent repository structure, clear commits, well-organized files	Good structure with minor issues	Acceptable organization	Poor structure	Disorganized repository

7	Communication Skills (README)	Clear, professional, detailed documentation with visuals	Well-written README with key info	Basic README present	Incomplete README	No README
8	Adaptability	Quickly adapts and improves project based on challenges	Shows some adjustments	Limited adaptability	Resistant to change	No adaptation
9	Value Creation (User Focus)	Blog provides meaningful user experience/features (The project runs correctly and fulfills the basic requirements (UI, logic, and functionality)).	Some user-focused features	Basic usability	Limited usability	No user consideration
10	Commitment & Effort	Consistent progress with at least 3 meaningful commits (well-documented)	Regular commits with clear effort	Minimum required commits	Irregular commits	Little to no effort
